SUMMARY

Junior programmer in solving programming problems, good at communicating with others and helping them, specialized in designing front-end interfaces for websites, stores and personal pages, skilled in managing strategic projects and leading a team, I am looking for a challenging executive role to benefit from technical expertise and drive programming excellence.

WORK EXPERIENCE

IT student

April 2024

- I learned the basics and some libraries of Python language and built many projects on it.
- I learned the basics of C language and built many projects on it.
- I worked on the smart basket project in the first stage of university using the Arduino chip using the C language. The project was a smart trash can that sorts materials and when the basket is full it turns on the light to alert the user that the basket must be emptied immediately.

I started specializing in front-end programming.

May 2024

- I had learned the basics of programming and logical thinking. I first started learning the website coding language (html.5)
 - After learning the markup language or the structuring language, I started learning the formatting language (CSS .3) to help me create formats to structure the website.
 - After that, I started learning the JavaScript language to enter the programming logic into my website and make it distinct from other websites and more responsive to the user.
-

EDUCATION

Studying in Industrial and Energy Technology

Oct 2023 -

- I study information technology and computer science
 - I am in the second year at university now.
-

ADDITIONAL INFORMATION
